

ENGLISH INTRODUCTION CLASS

Directions: Read the passage carefully and answer the questions that follow.

Indonesia's tsunami has raised fears about the few dozen Javan rhinos still living in the world. There are believed to be fewer than 70 of the critically endangered species in Ujung Kulon National Park not far from the volcano that triggered the killer wave. None of the animals are killed in the disaster but officials are warning that another deadly wave could slam into the stricken region. That is putting pressure on conservationists at the National Park to ramp up a longstanding plan to find a suitable secondary habitat for the rhinos. Plans to find a second home for the species have been in the works. The shy creature once numbered in the thousands and roamed across Southeast Asia. But, like other rhino species across the world, poaching and human encroachment on its habitat has led to a dramatic population decline. The rhino horns are used in traditional Asian medicine fetching ever higher prices on the black market.
